PROFESSIONAL SUMMARY

Machine Learning Engineer with end-to-end, production experience building ML systems, automated data pipelines, and AI-powered applications - from a live enterprise engineering role through six major independent builds. Computer Science (Data Science) graduate with Dean's List recognition (CGPA 3.45/4.00). Proven ability to design leakage-safe Scikit-Learn pipelines, integrate transformer-based NLP microservices (DistilBERT), build real-time event-driven architectures, and ship model-ready data infrastructure that stakeholders actually use. Comfortable owning a feature from architecture through deployment - feature engineering, model evaluation, MLOps monitoring, and cloud data migration on Microsoft Azure and Google Cloud Platform. Currently applying these skills in a production enterprise environment; ready to bring the same rigor to a full-time Machine Learning Engineer role, remote or on-site.

100,000+ Records in Production ETL • 83% ML Precision Benchmark • 40% Manual Processing Reduced • 3.45 CGPA / Dean's List

CORE TECHNICAL SKILLS

Machine Learning: Supervised Learning (Classification & Regression), Model Evaluation (Precision/Recall/F1), Feature Engineering, Hyperparameter Tuning, Scikit-Learn Pipelines

ML Engineering & MLOps: End-to-End Pipelines, ColumnTransformer (Data Leakage Prevention), Model Monitoring, Performance Optimization, Cross-Validation, Git Versioning, Docker

AI / NLP: DistilBERT (Transformers), TensorFlow, Keras (Neural Networks), NLP, Sentiment Analysis, Human-in-the-Loop Evaluation, LLM Output Assessment

Data Engineering: SQL (Advanced ETL/Joins/Normalization), Python (Pandas, NumPy), Automated Pipelines, Association Rule Mining, Microsoft Azure (ETL & Data Migration)

Real-Time & Event-Driven: WebSocket Architecture, Geofenced Data Streams, Automated Routing Pipelines, Trigger-Based Workflow Systems

Deployment & Cloud: Streamlit (Interactive Apps), Google Cloud Platform (Certified), Microsoft Azure, Docker, Git/GitHub, CI/CD

Visualization & Analysis: Power BI, Tableau, Matplotlib, Seaborn, Time Series Analysis, EDA

Data Quality & Governance: Immutable Audit Logging, Data Validation Frameworks, Anomaly Detection, Error Classification, Traceability

Languages: Arabic (Native), English (Professional), Malay (Basic), Russian (Basic)

PROFESSIONAL EXPERIENCE

IT & Data Engineer - Full-Stack, ETL & Security Engineering | Tradewinds M Berhad Apr 2026 - Oct 2026

Kuala Lumpur, Malaysia • Malaysia's largest integrated agribusiness group

- Architecting a Talent Management System (TMS) with a React + TypeScript frontend and a Django REST backend, implementing RBAC, employee lifecycle workflows, and audit-compliant data handling
- Designing and executing ETL pipelines and Azure cloud data migration strategies, ensuring data integrity, schema normalization, and end-to-end traceability across enterprise systems
- Conducting penetration testing and vulnerability assessments across internal systems, documenting findings and recommending remediation aligned to enterprise security standards
- Collaborating cross-functionally with HR, IT, and business stakeholders to translate requirements into production-grade technical solutions

MACHINE LEARNING & AI ENGINEERING PROJECTS

KSIS-TEAPS: AI-Powered Institutional Data Platform

Oct 2025 - Mar 2026

Final Year Capstone - 6-Month Production Build

- Designed and deployed a production-grade AI data platform integrating a DistilBERT transformer microservice for real-time sentiment analysis and noun-chunk extraction on unstructured teacher feedback text
- Built a weighted KPI scoring engine with immutable audit logging and a formal dispute-recalibration state machine - ensuring mathematically neutral, fully traceable data outputs for HR decision-making

- Engineered a real-time event-driven data architecture with WebSocket broadcasting, geofenced attendance data streams, automated leave/overtime routing pipelines, and continuing education compliance tracking
- Implemented deterministic RBAC with OAuth authentication and HR-controlled provisioning - enforcing data access governance across a multi-role institutional environment
- Delivered full institutional configurability without code changes - data schemas and pipeline behaviour adapting dynamically to configuration rather than hardcoded logic

RainToday ML Pipeline - Production-Grade AI Data Engineering

Jan 2026 - Feb 2026

- Built a leakage-safe Scikit-Learn pipeline using ColumnTransformer with automated seasonal and categorical feature engineering - preventing data contamination between training and inference stages
- Conducted full model evaluation comparing Logistic Regression (74% recall) vs Random Forest (83% precision); identified Humidity3pm as top predictor through feature importance analysis
- Implemented cross-validation, performance monitoring, and structured error documentation - pipeline ready for real-time deployment

Predictive Maintenance & Automated Anomaly Detection System

Jan 2026

- Architected an end-to-end ML data pipeline for system performance monitoring - replacing reactive manual inspection with automated, always-on anomaly detection at 83% precision
- Built statistical validation workflows, error analysis reporting, and model monitoring dashboards for continuous performance tracking and maintenance handoff

Retail Sales Forecasting & Demand Prediction Pipeline

Apr 2025 - May 2025

- Processed and normalized 100,000+ transactional records through advanced SQL ETL and Pandas pipelines; detected weekly seasonality and regional growth patterns through time-series decomposition
- Built and deployed an Association Rule Mining pipeline for product affinity analysis, feeding results into interactive Power BI dashboards - reduced manual analysis cycles by 40%
- Delivered model-ready structured datasets and validation reports to support downstream ML models and business intelligence systems

Financial Credit Risk Assessment - Supervised ML Pipeline & Deployment

Feb 2024 - Mar 2024

- Engineered a complete supervised learning data pipeline classifying credit applicants using multiple models, statistical validation, and hyperparameter tuning
- Developed and deployed an interactive Streamlit application converting model outputs into real-time business dashboards for non-technical stakeholders

LEADERSHIP & PROFESSIONAL IMPACT

President - Sudanese Student Community (500+ members)

Nov 2024 - Nov 2025

Kuala Lumpur, Malaysia

- Led cross-functional technical coordination with university IT teams on data and systems initiatives
- Managed structured reporting, knowledge transfer sessions, and operational data-driven planning across a large multicultural organization

EDUCATION & CERTIFICATIONS

Bachelor of Computer Science (Data Science)

Oct 2023 - Present

Albukhary International University, Alor Setar, Malaysia

- CGPA: 3.45/4.00 - Dean's List Award for Academic Excellence
- Relevant coursework: Machine Learning, Data Engineering, Statistical Modeling, NLP, Database Systems, Cloud Computing

Certifications

- Introduction to Deep Learning & Neural Networks with Keras - Coursera / IBM (Jul 2026)
- Data Engineering Essentials - Coursera / KodeKloud (Aug 2026)
- Machine Learning with Python - Coursera / IBM (Feb 2026)
- Google Cloud Computing Certificate - Cloud Data Analytics (Sep 2025)
- Database and SQL for Data Science with Python - Coursera / IBM (May 2025)
- Data Analysis with Python - Coursera (Jul 2025)
- Exploratory Data Analysis for Machine Learning - Coursera / IBM (May 2025)

Open to full-time Machine Learning Engineer roles - remote or on-site, Malaysia or global relocation considered.
